Course Administrator

Trudie Imrie: trdcglasgow@btinternet.com

Due to the nature of the course, places are limited, therefore early booking is recommended to avoid disappointment.

The hands-on modules included are:

Conventional model surgery planning
Hands-on participation in face-bow recording, mounting of models on semi-adjustable articulators and occlusal prediction planning.

3D digital orthognathic planning
The participant will have the opportunity to carry out 3D prediction planning on selected cases using KLSMartine IPS orthognathic software packages.

Planning for surgery-first cases
Demonstration of the concepts behind the surgery-first approach, including case selection, occlusal planning, challenges and results.

Surgical innovations and tips
This will include a step-by-step guide to the planning and printing of customised surgical plates. Surgical tips will be demonstrated to reduce morbidities and enhance post-operative recovery.

Also in the programme:

1. Lectures covering the clinical topics.
2. Round-table case discussions.
3. Presentation of research findings.

Innovations in Orthognathic Treatment – 31st August – 1st September 2023.
